With SEMCO's unique REMODEL WITHOUT REMOVAL™ system you can remodel any solid surface without the cost, inconvenience and potential environmental damage associated with the removal of the existing surface. SEMCO surface engineers have perfected this method through the use of the X-Bond Seamless Stone, which chemically adheres to any existing surface. This system saves clients time and cost on their projects, while offering significant "GREEN" benefits.

Remodel Without Removal™ is registered trademark of SEMCO Modern Seamless Surface

A system which allows you to resurface without the removal of the existing substrate
